

Brief description of the product

The dishwasher object of this offer has been produced from 1970 to 1990 for the European market and it was a best product for the quality of the washing.

In fact one of the most important “plus” of this model was the power of the washing: it was able to clean any dish with any kind of dirtiness.

The inner structure is completely built in stainless steel (INOX) able to resist for many years to any kind of corrosion.

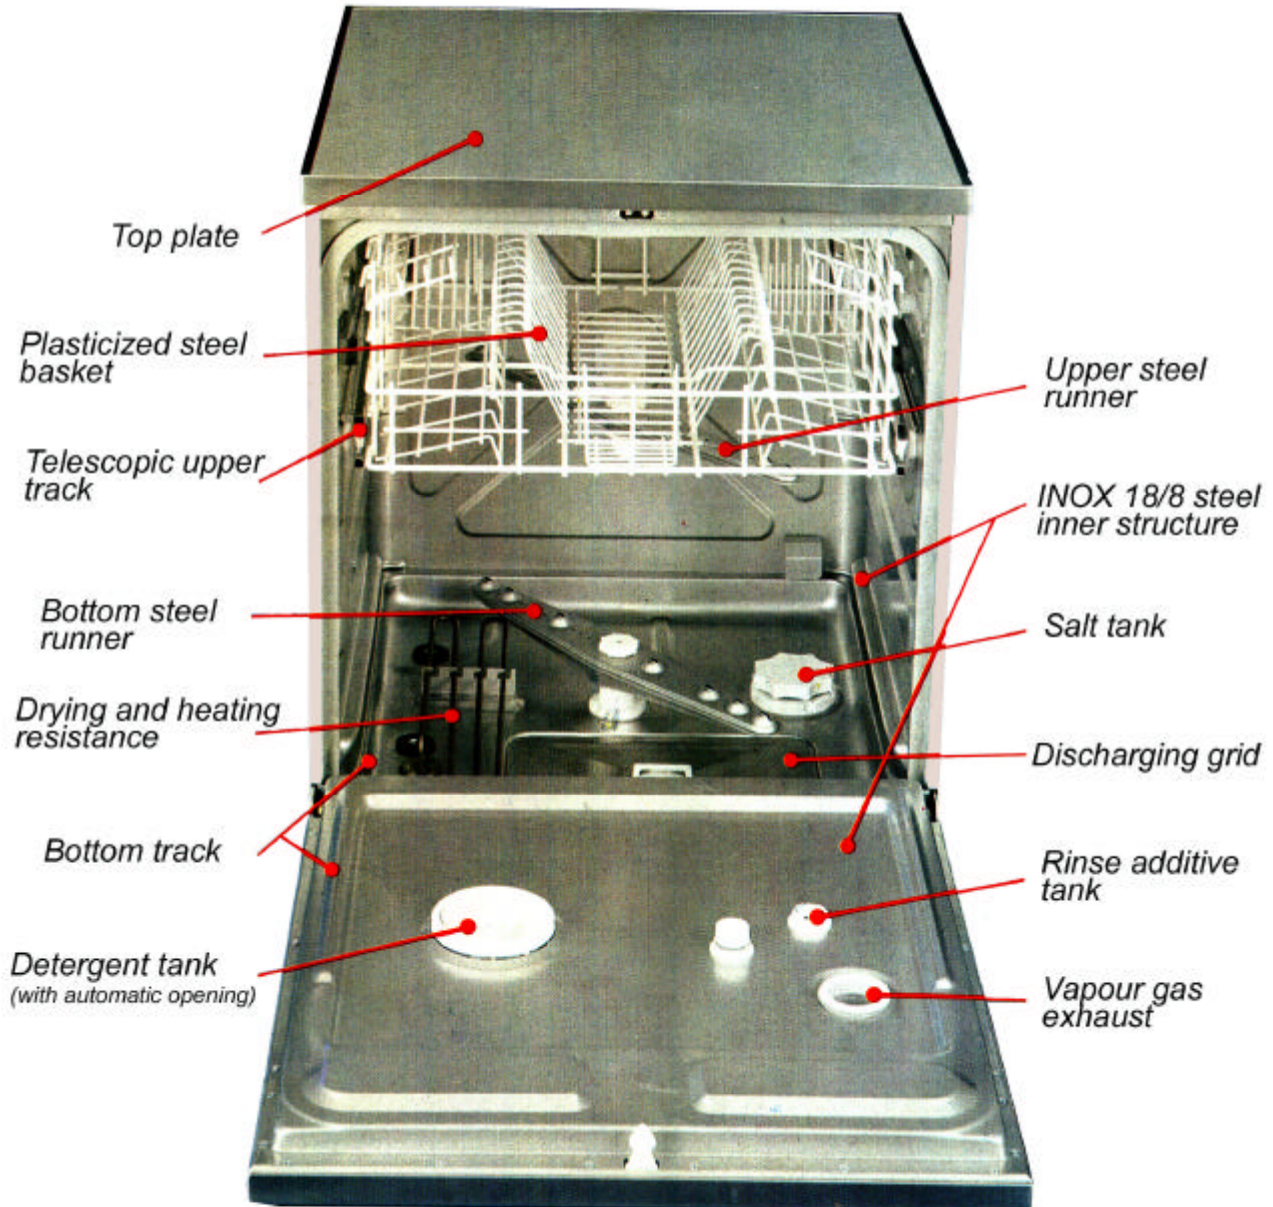

This two primary characteristics make this product a winner product in any kind of the market and can improve the “total quality” image of the producer.

The washer can be sold with a “top” or without

so it can be easily put under a sink (see image).

The control panel is made with electric-electromechanical components: this can be considered an advantage because it is very economical, stronger than the electronic one, easy to repair, ... It can be assembled with different types of buttons. Images here show you the original model with colored buttons.

Original tooling & original documentation

We have 77 molds which are the 80% of the total sheet metal parts of the dishwasher. The most important (and expensive) molds are in good conditions. Please consider that this model was produced in not more than 50.000 units!

The molds that are necessary to finish the project can be easily made internally by You.

The most important thing to consider is that we have ALL the original documentation: all drawings, production cycles, bills of materials. It can be easily considered that this is the main advantage of this offer.

Consider that re-design this dishwasher is like design a new dishwasher with a cost that can't be sustained easily by any companies (in Europe we see one new model of dishwasher every 6-8 years, and we are speaking about big companies like Whirlpool, Electrolux...).

Components

Because we have all the documentation we can easily find in the market all the components You need to assemble the product: now we can directly send to You this components and follow You during the production to ensure You about the quality of the dishwasher.

Modifications

Enclosed to this offer we include a complete three dimensional development of the dishwasher.

This is necessary to ensure that new components You decide to put in the dishwasher can fit the original project. This will also help us to modify all the particulars which molds have to be realized to make them cheaper.

With three dimensional development You will also have: new updated drawings, sub assemblies and assemblies, exploded views, 3D parts and 3D assemblies.
